

ACRONIS FILES CLOUD

Secure file sync and share for access anytime, anywhere

WHAT IS FILES CLOUD?

As an easy-to-use file sync and share solution, Files Cloud gives you access to files wherever you are and whenever you need it. Developed by the award-winning security backup vendor Acronis, it's designed for small to medium-sized businesses and is widely described as the best alternative to Dropbox Business.

There's no learning curve involved either. Simply set up your employees with a username and password to access the Acronis Portal and they can upload and share files straight away with their colleagues, no matter where they are or what device they are using.

DID YOU KNOW...?

The average individual switches between three file sharing apps while at work.

CLOUD ADOPTION & RISK REPORT, SKYHIGH NETWORKS

WORKS ON ANY DEVICE

The beauty of a modern file sync & share solution is being able to use it on any device. So, whether that's on your Desktop PC, smartphone or tablet, the Files Cloud client can be downloaded to any Android, iOS or Windows operating system. Easily download the client to any device straight from the Acronis Portal and start sharing files with your colleagues instantly.

For business people who are always on the move, or for those who work on site with mobile access only, there's a smart way to access shared files on your phone. Files Cloud fully supports popular Microsoft Office apps such as Word, Excel and PowerPoint, meaning you can easily edit, collaborate on and suggest comments on business documents without leaving the mobile app. All your changes are automatically saved so users can see your edits instantly.

SECURELY SHARE FILES WITHOUT WORRY

Controlling where your company documents are, who they've been shared with and how long they've been in the public cloud can be a nightmare for your data handlers or compliance officers. Piecing together a viable audit trail of the document's shared version history can be time consuming and often takes days or weeks to complete. But with Files Cloud, you'll get a full view of your transaction history via its enterprise-grade audit trail. Easily discover where the document is, who it's been shared with and how long they've had access to it through the Acronis client.

Sharing files through the Acronis client is so easy too. If your employees want to send a document to an external party, they can quickly create a public link to the file or folder. From the client, simply choose your recipient, enable view or editing permissions and set an expiration date for the file. Once the recipient receives an email with their invitation to view the file, they are directed to the Acronis client and can view or download it.

“File Sync & Share services are expected to reach
\$1.3 billion in revenue by 2019.”
