# Hosted Azure for your business

Build virtual servers, deploy with flexibility, and reduce your hardware costs
with a managed cloud solution.

**Arctic FoX**
Consultancy Services Limited

Azure is approximately 50 percent cheaper than other cloud services in the market.

# A flexible solution in the cloud.

Your virtualised ticket to the cloud is waiting...

Azure is easily scalable, enabled for business growth, and provides economical value. By using virtual servers, which are stored securely in Microsoft managed data centres, you have access to automated backup and disaster recovery options, the ability to scale up in order to meet demand, along with enhanced storage solutions to meet your business needs.

Office 365, Dynamics 365, and EM+S work seamlessly with Hosted Azure.

# Quick and easy to deploy.

Hosted Azure can be deployed quickly without the need to purchase complex and expensive infrastructure. Not only can you reduce your hardware costs by moving to the cloud, but you'll also benefit from controlled maintenance and round-the-clock security from a fully managed and trusted service. It means you can focus on meeting customer demand without service interruption.

It's the perfect tool for moving to the cloud as it extends your existing IT environment, easily integrating with databases and hybrid storage solutions. Plus, you'll be able to build applications directly within the cloud platform, giving you simplified deployment across mobile and web.

# Infrastructure as a Service or Platform as a Service?

Hosted Azure can be used as either Infrastructure as a Service (IaaS) or Platform as a Service (PaaS), depending on your business needs. Website and application developers may benefit from using Azure as a cloud platform where they can work on, test and trial software for web and mobile. On the other hand, IaaS is perfect for businesses that need full compliance when storing sensitive data in the cloud. Your data is always replicated three times in Azure and stored within UK data centres, so you can rest assured your critical information is safe.

Both IaaS and PaaS with Hosted Azure can accelerate your business today by allowing you to focus on what matters most.

# Why Azure?

**A wrap-around solution**
Azure can work around many business models without hassle, giving you an elastic approach to the cloud service.

**Works seamlessly with Office Apps**
Hosted Azure works hand-in-hand with Office 365, Dynamics 365, and Enterprise Mobility + Security.

**Perfect for testing and development**
Its natural agility enables users to develop and trial applications from within its suite of tools without the expensive outlay on hardware.

**Best for Hybrid**
Hosted Azure is great for those looking at a managed service solution without moving everything to the cloud in one go.

### Deploy almost anywhere
Microsoft has a large geographic presence with over 30 data centre regions across the globe. Azure can be deployed from anywhere so there's no restriction by location.

### Pay for what you use
Need more resources? No problem. With Azure you can easily scale to allow for customer demand and drop back when it's not needed, meaning you only pay for what you use.

### Disaster recovery and back up
From scalable storage solutions to a disaster recovery failover, using Azure means your data is replicated three times in the cloud for supreme levels of security.

### Fully compliant
Azure meets full compliance needs as recognised within the Microsoft Trust Centre, so your data remains yours when in the cloud.

# Technical Feature Summary

## Compute

- Virtual Machines
- VM Scale Sets
- Cloud Services
- Batch
- RemoteApp

## Web & Mobile

- Web Apps
- Mobile Apps
- Logic Apps
- API Management
- API Apps
- Notification Hubs
- Mobile Engagement

## Data & Storage

- SQL Database
- DocumentDB
- Redis Cache
- Storage (Blobs)
- StorSimple
- SQL Server Stretch Database
- Search

# Continued...

### Analytics

HDInsight

Machine Learning

Stream Analytics

Data Catalogue

Power BI Embedded

### Media, Internet of Things & Intelligence

Media Services

Azure IoT Suite

Azure IoT Hub

Event Hubs

Cortana Intelligence Services

### Networking & CDN

Virtual Network

ExpressRoute

Traffic Manager

Load Balancer

VPN Gateway

Application Gateway

Content Delivery Network
